

Supporting Long-Term Care Home (LTCH) and Retirement Home (RH) stakeholders through implementing and evaluating resources to promote vaccine confidence (Vaccine+) and wellness (CARE+)

Improving occupational and mental health and **wellness** as well as **vaccine confidence** among LTCH/RH staff is a high priority. The Wellness Hub Program aims to support LTCHs/RHs with these needs through offering resources packages focused on staff wellness (**CARE+**) and vaccine uptake (**Vaccine+**).

PSWs in LTCHs and RHs: We want to hear from you!

We are inviting personal support workers (PSWs) working in LTCHs and RHs to participate in a study to learn more about the factors that have impacted **1) staff wellness**, and **2) COVID-19 vaccine confidence and uptake** throughout the pandemic. These findings will be directly applied to update the Vaccine+ and CARE+ resource packages being delivered through the Wellness Hub Program.

Participating in the study **involves 1 interview session lasting about 45-60 minutes**. Interviews can be conducted remotely. **You will receive a \$50 honorarium for participating.**

We are interested in recruiting individuals over 18 who are comfortable speaking and understanding English and who:

- 1) Currently work in PSW role in a LTCH/RH setting
- 2) Have worked in this LTCH/RH setting for at least four months since March 2020

If you are interested in learning more, please contact the Wellness Hub team at WellnessHub@unityhealth.to or by leaving a voicemail at 416-864-5697.
