

Wellness Hub for Shelters: Monkeypox Virus (MPV) Resource Package

Purpose: this resource package was created by the Wellness Hub and Inner City Health Associates (ICHA) teams to provide a list of essential resources and guidance, in order to support frontline staff in shelters and congregate care settings with the Monkeypox Virus outbreak.

What is the Monkeypox Virus?

- The Monkeypox Virus (MPV) is a virus that spreads through close contact with someone who is infected 1
- Symptoms include fever or chills, headache, muscle aches, backache, swollen lymph nodes, feeling very tired, runny nose, rash with blisters, cough or sore throat (sometimes)¹
- The MPV Rash (shown in the image below) begins as flat red spots then turns into blisters and forms a crust. It is usually found on palms of hands, soles of the feet, inside the mouth, on the genitals/ anorectal (or bum) area. ^{1,2}
